

LFR660 v4 Omnidirectional

IMPORTANT SAFETY INSTRUCTIONS

CAUTION

1. Read these instructions.
2. Keep these instructions.
3. Heed all warnings.
4. Follow all instructions.
5. Do not use this apparatus near water.
6. Clean only with dry cloth.
7. Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.
8. Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
9. Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
10. Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
11. Only use attachments/accessories specified by the manufacturer.
- 12.

Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.

13. Unplug this apparatus during lightning storms or when unused for long periods of time.
14. Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.
15. Do not expose this apparatus to dripping or splashing and ensure that no objects filled with liquids, such as vases, are placed on the apparatus.
16. To completely disconnect this apparatus from the AC Mains, disconnect the power supply cord plug from the AC receptacle.
17. The mains plug of the power supply cord shall remain readily operable.
18. Do not expose batteries to excessive heat such as sunshine, fire or the like.

The lightning flash with arrowhead symbol within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the product.

WARNING : To reduce the risk of fire or electric shock, do not expose this apparatus to rain or moisture.

SAFETY PROCEDURES

- Ensure that you connect your DSP only to the type of power supply indicated on the rear panel, and ensure that the power cord cannot be walked on or otherwise damaged.
- To prevent electric shock, match wide blade of plug to wide slot, fully insert.
- Ensure that objects or liquids are not allowed to penetrate the enclosure.

Every member of our Axiom team is pleased that you have decided to purchase one of our products. We have all worked hard to bring the highest level of satisfaction to your audio experience.

Axiom is deeply committed to ongoing audio research. It began in the early 1980s when I was involved with the world-class psycho-acoustical research that was being conducted at the National Research Council in Ottawa, Canada. Since that time we have built one of the finest acoustical laboratories in the world at our facility in Dwight, Canada where we continue this research allowing Axiom to provide the world's most realistic-sounding loudspeakers.

At Axiom our goal is to provide you with a truly exciting and emotional experience every time you listen to your audio system. We want you to feel part of our Axiom family and as such we stand at the ready to deliver personal, expert advice on any of your audio needs.

Sincerely,

A handwritten signature in blue ink, appearing to read 'I. Colquhoun', is positioned above the printed name.

Ian Colquhoun
President and Founder
Axiom Audio

Placement

The location of your new Axiom LFR660 speakers will significantly affect the sound quality you experience in your particular room so take care to position them correctly. Since the LFR660 is an omnidirectional speaker with active drivers located in both the front and rear of the cabinet you will want to keep some space all around your LFR660s. Around twelve inches (300mm) would be considered the neutral position. If you need to place them closer to or further from the wall or corner than this your DSP box does have a switch on the rear panel labeled "Boundary Compensation". Around 8" (200mm) from the wall would be "Near 1" and 6" (150mm) or closer would be "Near 2". If you are more than 24" (600mm) from the wall "Far 1" should be used and more than 48" (1200mm) would be "Far 2". The "Boundary Compensation" switch can also be used to adjust for highly reflective or highly damped rooms. A highly reflective room may be more suited to the switch being in one of the "Near" positions and a highly damped room one of the "Far" positions. Ultimately it is best to try various positions in your room and go with what you feel delivers the best performance.

For a wide and spacious stereo or home theater soundstage, separate the front left and right speakers by 6 feet or more, up to 12 feet apart, or by at least half the distance you sit from the speakers, e.g. if you sit 15 feet away from the speakers, separate them by at least 8 feet if possible. You can experiment with slightly angling the speakers in toward the listening area or having them face straight out into the room. Each room is different, and toeing in the speakers toward your seating may improve the stereo soundstage. LFR660s have the unique ability of removing the "sweet-spot"; a large 3-D soundstage can be enjoyed from many seating positions

Hookup

Turn your speakers around and look at the back panel. You'll see two sets of gold-plated 5-way binding posts, to which you are going to connect the speaker cables from your amplifier. Each gold binding post is color coded - RED is POSITIVE, BLACK is NEGATIVE. You will also see a positive (+) sign engraved in the plastic beneath the RED binding post, and a negative (-) sign beneath the BLACK post. It is important that the negative wires from your amplifier go to the negative inputs on your speaker and the positive wires from your amplifier go to the positive inputs on your speaker. The top set of binding posts are for the speakers in the rear of the LFR660. These should be connected to your amplifier on the same channel as OUT REAR on your DSP. The lower set of binding posts are for the speakers in the front of the LFR660. These should be connected to your amplifier on the same channel as OUT FRONT on your DSP.

If you purchased the bi-amp/bi-wire option the front speaker section your bottom input will have two sets of 5-way binding posts. The top set is always the high frequency and the lower set the low frequency. These two sets of binding posts are connected with bridging bars which are required if you are only using one amp and one speaker cable. To utilize the bi-amp or bi-wire feature be sure to remove these bridging bars.

Leveling

To level your speaker simply rotate the outside of each foot until they reach the desired height.

Front Left Speaker: White
Subwoofer: Purple
(line-level RCA output only)
Front Right: Red
Center: Green
Left Surround (side): Blue
Right Surround (side): Gray
Left Back Surround: Brown
Right Back Surround: Tan

Bare Wire

Spade Lug (1/4-inch spade)

Banana Plug (3/4-inch spacing)

For detailed instructions on dual binding post inputs please visit
www.axiomaudio.com/dual-input-connections

Connecting the DSP

Step 1 (Check your Voltage)

Look at the rear panel of your DSP. You will notice a voltage rating beside the power switch. Be sure this rating corresponds to the voltage supplied in your country. If there is a difference please do not proceed any further and contact AXIOM for assistance. Failure to use the proper power supply will result in immediate and permanent damage.

Step 2 (DSP Inputs)

If you have a DSP-1 or DSP-3 you will see two possible input connections from your receiver or pre-amp; binding posts and RCA connectors. If your receiver has pre-amp outputs use these to connect the front right and left channels to the DSP using RCA cables. If your receiver does not have pre-amp outputs you can use a speaker wire to connect the speaker outputs of your receiver's front right and left channels to the binding posts on the DSP.

If you have a DSP-2 or DSP-4 you will see two possible input connections from your receiver or pre-amp; Balanced XLR and RCA connectors. Whichever type of connector you use from your pre-amp outputs to your DSP-2 or DSP-4 you should also use going from your DSP-2 or DSP-4 to your amplifier.

Step 3 (DSP Outputs)

If you have a DSP-1 use RCA cables to connect each output (Right Front, Right Rear, Left Front, Left Rear) to the inputs of a 4-channel amplifier.

If you have a DSP-2 use either RCA or XLR cables to connect each output (Right Front, Right Rear, Left Front, Left Rear) to the inputs of a 4-channel amplifier.

If you have a DSP-3 you should now follow the instructions for Wiring Your Speakers.

If you have a DSP-4 use either RCA or XLR cables to connect each output (Right Front, Right Rear, Left Front, Left Rear, Center Front, Center Rear) to the inputs of a 6-channel amplifier.

Step 4 (Power Cord)

Connect the power cord to your DSP and plug it into your power supply. Turn on the main power switch on the rear panel. The front switch will now be active for turning your DSP on and off. The light on the front will glow blue to indicate your DSP is now ready for use.
